3. RTI driver	2
4. KNX Group Address Converter	2
5. tlist.exe	2
6. trace.exe	2
7. sfk.exe	2
8. putty.exe	2
9. winscp.exe	3
10. zip.exe	3
11. unzip.exe	3
12. mp3tagv253setup.exe	3
13. HxD.exe	3
14. Cyberduck-Installer-5.2.0.21317.exe	3
15. SafariSetup-5.1.7.exe	3
16. Install-IrTool-1.9.exe	3
17. simknx.exe	3
18. siminstreamer.exe	3

On every link in this page, right click then select "Save As" to download the file.

1. [Install-ServerAdmin.exe](#)

the trivum Server Administration Tool for Windows

- to find trivum devices with their IP in the network
- to change network settings, like static IP or DHCP setup

2. IPFinder for Android

is available in the Google Play Store.

For Android devices which have no Google services, a direct download link for manual installation is available here:

<http://service.trivum-shop.de/share/Tools/trivum-ipfinder.apk>

documentation for manual installation can be found under:

<https://www.trivum-shop.de/support/docs/en/trivum-android.html>

3. RTI driver

the latest RTI V9.2x driver is available under [trivum-rtidriver-v92x.zip](#)

the version history is available under [RTI changelog](#)

for documentation go to [trivum RTI driver documentation](#)

4. KNX Group Address Converter

Converts between 1-level group addresses and 3-level with 5/3/8 bits.

5. tlist.exe

Command line tool for Windows, to list trivum devices in the command line.

A version for Mac OS/X is available [here](#).

6. trace.exe

Get detailed traces from a trivum device.

A version for Mac OS/X is available [here](#).

7. sfk.exe

Command line multi function tool for Windows, for analysis of network, KNX and Airplay.

- `sfk knxdump` shows all knx ip routing traffic in the network.
- `sfk knxsend "1 2 3 8 100"` sends an 8-bit knx message with value 100 to GA 1/2/3.
- `sfk help knx` lists further knx examples.
- `sfk udpdump -bonjour` shows AirPlay name announcements in the network.
- `sfk ping mynet` shows all used IP's in your own subnet.
- `sfk ping 100 101 102` pings 192.168.1.100, 192.168.1.101 etc. if your subnet is 192.168.1.x
- `sfk zip out.zip mydir` creates a zip file with all contents of mydir.
- `sfk unzip out.zip` extracts a zip file.
- `sfk web ".100/xml/zone/getAll.xml" +xmlform` get zone status from device .100

8. putty.exe

Telnet client, for trivum service staff.

9. [winscp.exe](#)

SCP file transfer tool, for trivum service staff.

10. [zip.exe](#)

Zip file creator for the Windows command line.

11. [unzip.exe](#)

Zip file extractor for the Windows command line.

12. [mp3tagv253setup.exe](#)

MP3Tag to edit meta informations in MP3 files.
